# Myion

Escaping polluted air might feel like a mission impossible, on our polluted planet. We inhale daily **20.000 litres of contaminated air** during all of our 24 hours activities: while traveling to work, flying, shopping, dining, attending social events and even while sleeping.

Air pollution has a devastating effect on every cell in the body and contributes to everything from **diabetes**, and **dementia** to **fertility problems** and **childhood leukemia**.

**Sadly, every eight death is directly caused by air pollution.**

Can we protect ourselves from lurking bacteria, viruses, allergens and all other pathogens?  
Yes, we can.

***“For people to be and stay healthy, they must breathe clean air from their first breath to their last.”***

Dr Flavia Bustreo,  
Assistant Director General at World Health Organisation

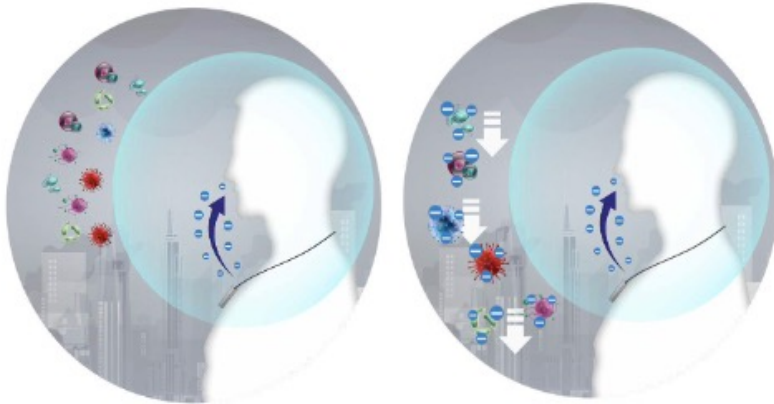

# Personal ion Air - Air Purifier

Myion is an **innovative, wearable air purifier** which uses **advanced air ionizing technology** to eliminate all **harmful airborne particles: PM 2.5, dust, allergens and viruses.**

Using a unique built-in carbon fibre brush system, Myion releases **massive 18 millions of negative ions per cm<sup>3</sup>**, creating an invisible barrier that prevents dangerous particles from entering the respiratory system.

Negative ions purify the air by **magnetically attracting to pollutants** until these newly-formed larger particles become too heavy to remain in our breathing zone.

Small and portable Myion creates a zone of clean, healthy air within a radius of **1.5 m** around the device.

# Myion - Personal Protection On the Go

**Compact and lightweight:** Myion weighs only **25 grams**, which allows you to carry it wherever you go. Modern and sleek design makes it a unique accessory that is both **practical and highly effective.**

**Powerful and quiet:** Myion has a **10-hour** rechargeable battery life for protection all day long. The device is rechargeable with a micro USB cable and the **charging time is approximately 2 hours.** Myion is designed for **quiet operation** and does not make any noise.

**Hassle-free and economical:** No filter maintenance or replacement is required. Easy to use with just one **ON/OFF** button.

# Breathe Clean , Healthy Air - Wherever You Go!

**MyIon is a superb device for creating a safe environment at any time and in any occasion - whatever you do, wherever you might be:**

# Negative ion – A Treasure of Nature Given to You

Exposure to negative ions, also known as Vitamin of the Air, gives us that special feeling we get when **at the beach, near a waterfall or after a storm.**

With My<sup>i</sup>on, we take that feeling everywhere with us!

## Negative Ions

- Keep the body's pH level alkaline, reduce the risk of getting infected and lessen the severity of COVID-19 symptoms
- Accelerate the production of lymphocyte, thereby increasing the amount of antibodies essential to identify and neutralize viruses
- Strengthen immunity cells, enhancing their ability to destroy pathogens and protects the body from viruses and bacteria
- Remove bacteria and viruses from air, reducing the transmission of infection
- Improve blood circulation, reduce blood sugar level and cholesterol
- Have anti-allergic effects

- Reduce and prevent symptoms of asthma
- Balance the autonomic nervous system, regulate the heart rate digestion, and respiratory rate
- Increase serotonin levels, helping to reduce anxiety, stress, fatigue, depression and migraine
- Enable better sleep and relaxation
- Improve cognition of drivers
- Have natural painkiller and anti-inflammatory effects
- Improve skin conditions and prevents hair loss

## Maximizing Protection from Viruses Including Coronavirus

Masks are effective while we wear them, but they become useless when we remove them to eat, drink, work out, or during facial and dental treatments, etc.

**MyIon wearable purifier is a perfect device for a first line defence against viruses on every occasion**

### How do negative ions eliminate viruses?

Negative ions attach to airborne pathogens, such as viruses, causing a chemical reaction on the cell membrane's surface. This deactivates viruses, rendering them harmless.
